### **Re-engineering Engineering**

*Tuesday 14 April · 9:00 to 10:00 am · Crystal H Ballroom*

The pace of change of modern technology requires that the engineering profession reinvent itself. This will be demanding because of the explosion of new knowledge coupled with the growing importance of engineering to the solution of many global problems. The engineer of the 21st century will have certain fundamentals in common with the one of the 20th century; however, the 21st century engineer is unlikely to recognize the education received by his or her predecessor. Even the language is different ... think about it: mouse, chip, computer, virus, and more!

Mr. Augustine has been presented the National Medal of Technology by the President of the United States and received the Joint Chiefs of Staff Distinguished Public Service Award. He has five times received the Department of Defense's highest civilian decoration, the Distinguished Service Medal. He is co-author of *The Defense Revolution* and *Shakespeare in Charge* and author of *Augustine's Laws* and *Augustine's Travels*. He was selected by *Who's Who in America* and the Library of Congress as one of "Fifty Great Americans" on the occasion of the *Who's Who's* 50th Anniversary.

### Cyber Sensing Hot Topics

(Conference 7352B)

Wednesday 15 April · 8:30 am to 11:00 am • Crystal J1 Ballroom

Conference Chair: **Stephen Mott**, Sensors Directorate, Air Force Research Lab.

The term “cyber” has traditionally been used to refer to information systems and the networks which bind them. With the growing dependence on information systems by the modern world, cyber is thought of as a domain of operations where the entire electromagnetic spectrum (including electrons flowing over wires) is the medium. Although this seems overly broad, the medium itself is not what is truly important – it is how the operation of information systems is affected which defines what is and is not a part of the cyber domain. A basic example is that a “traditional” RF sensor can be considered a cyber sensor if it is being used in such a way as to detect the presence of a wireless network. As with any domain, the cyber domain requires the environment to be sensed in order to be able to have situational awareness. Cyber sensing seeks to exploit any part of the electromagnetic spectrum in order to provide the information necessary for that situational awareness so the integrity of information assets and the networks that bind them can be better maintained and defended.

School of Engineering, The University of Tokyo (Japan)

Fiber Optic Nerve Systems for  
Safety and Security

**Abstract:** Optical fibers can act as a sensor for strain, pressure and temperature through the optical properties, such as scattering, propagation-modes coupling, and so on. By additionally applying appropriate ways to analyze distribution of these properties along the fiber, “distributed optical fiber sensors” can be realized. These sensor systems, which are sometimes called as “fiber optic nerve systems,” sense damages induced in materials and structures, such as aircraft wings, pipe lines, bridges and tunnels, in which the fiber is embedded. The materials and structures that can feel their pain, which are realized by the “fiber optic nerve systems,” are expected to be the key for enhancing the safety and security in the 21st century society.

As the ways to analyze the distributed information, several techniques have been proposed and developed. Time domain techniques, in which pulsed lightwave is launched into the fiber and the backscattered component is measured as a function of time, have been developed. Distributed temperature sensing systems based on Raman scattering have already been available commercially. Distributed strain sensing based on Brillouin scattering has also been developed. In these time domain techniques, however, typical spatial resolution is about 1m, which is not enough for various applications. Dynamic strain sensing is also required for the health monitoring of the structures and the materials. However, the measurement time of these techniques is more than several minutes.

To overcome these difficulties, optical correlation domain techniques have been proposed, in which interference nature of continuous lightwave is manipulated to obtain the distributed information. By applying the technique, for example, to the fiber Brillouin distributed strain sensing, the spatial resolution of about 2mm and the sampling rate of 1kHz have already been realized, respectively. Aircraft health monitoring has been demonstrated with this technique. Additionally, a technique to measure simultaneously the distributed strain and temperature has recently been proposed. By applying the correlation domain technique, distributed lateral force measurement and a multiplexing scheme of fiber Bragg grating sensors have also been developed.

In this Keynote presentation, various types of the Fiber Optic Nerve Systems are explained, showing the principle, the performance and the applications.

**Biography:** **Kazuo Hotate** was born in Tokyo, Japan, on June 20, 1951. He received the B.E., M.E., and Dr.Eng. degrees in electronic engineering from the University of Tokyo, Tokyo, Japan, in 1974, 1976, and 1979, respectively. In 1979, he joined the University of Tokyo as a Lecturer. He became a Professor in 1993 in the Research Center for Advanced Science and Technology (RCAST), the University of Tokyo, and currently he is a Professor in the Department of Electrical Engineering and Information Systems, School of Engineering, the University of Tokyo. Since April, 2008, he serves as the Dean of the School of Engineering.

He was engaged in research of projection-type holography, and measurement and analysis of optical fiber characteristics. At present, he is working on photonic sensing, including “fiber optic nerve systems.” He has authored and coauthored several books on optical fibers and optical fiber sensors, and more than 300 journal papers and international conference presentations.

Prof. Hotate is Fellow of the IEEE, Fellow of the Institute of Electronics, Information, and Communication Engineers (IEICE), Fellow of the Society of Instrumentation and Control Engineers (SICE), and Fellow of the Japan Society of Applied Physics (JSAP). He is a Board of Governor member of the IEEE/LEOS. He received awards on photonic sensing, such as the Ichimra Prize from the New Technology Development Foundation (2001), the Hasunuma Prize from the SICE (2002), and the Electronics Society Prize from the IEICE (2003).

He served as the co-chairs for the SPIE Fiber Optic Gyros: Twentieth Anniversary Conference (1996), the Technical Program Committee Chair for OFS-13 (1999), and the General Chair for OFS-16 (2003). He has been serving as the Leader of the 21st Century COE (Center of Excellence) Program (2002-2006) and the Global COE Program (2007-) in Electronics formed in the University of Tokyo by the Ministry of Education, Culture, Sports, Science and Technology, Japan.

## What's News in Hardware and Software at the 2009 DSS Exhibition?

This Special Session was started four years ago and has been a very popular, well-attended success. Its intent is to bring together vendors and early arrival Thermosense and DSS exhibitors to highlight the newest products and services being shown at the Exhibition. In this way, the busy technical conference attendees can better prioritize their activities when visiting the exhibits. It is also a relaxed opportunity for getting to know one another better and to have informal discussions on matters of mutual interest. A limited time for 10- to 15-minute vendor presentations starts the session, followed by a reception with snacks and soft drinks. The list of vendors presenting will be in the final program and also available on-site.

Your company must be an exhibitor at DSS09 to be part of this event. If you are interested in participating, or have more questions, please contact:

## Fifty Years of Noise Radar: The Legacy of Billy Horton

*Tuesday 14 April · 5:00 to 6:00 pm · Crystal K Ballroom*

*Presenter:*

**Ram M. Narayanan**, The Pennsylvania State Univ.

The concept of noise radar was pioneered 50 years ago by Billy Horton of the former Diamond Ordnance Fuze Laboratory (renamed Harry Diamond Laboratories and then combined with other entities to form what is now the Army Research Laboratory) in Washington, D.C., USA. Horton recognized that one way to eliminate range and Doppler ambiguities was to use random noise as the modulating function and perform range determination by cross-correlating the return signal with a time-delayed replica of the transmit waveform. The talk will provide a historical account of noise radar from 1959 to 2009, describe notable results from worldwide R&D activities in noise radar, and predict possible developments over the next 50 years. Our efforts to track down Mr. Horton made us aware of some sad news. An obituary in the Washington Post on May 3, 2003, read in part: "Billy Mitchusson Horton, 84, an inventor and Army Department civilian who worked for the Harry Diamond Laboratories from 1953 to 1974 and became its technical director, died of a respiratory ailment April 28 at a hospice in Cleveland." However, his legacy lives on.

This talk is held in conjunction with the Radar Sensor Technology conference, 7308.

## Special Anniversary Session

*Thursday 16 April · 8:00 am to 12:00 pm · Grand Ballroom 8A*

A special session at this year's conference will acknowledge the 50th anniversary of HgCdTe – the most widely used detector in modern infrared systems. The invited papers in this session will cover both the history of this technology's development and a summary of the current state-of-the-art. Speakers have been invited from the United Kingdom, France, Germany, Russia, Poland, the United States, Israel, Japan, Korea, China, Australia, and India to present a world-wide summary of the status of this detector technology. The session also includes a Government Panel Discussion on Thursday 16 April from 11:20 am to 12:00 pm.

This special session is held in conjunction with the Infrared Technology and Applications conference, 7298.

Dr. Joseph (Chuck) Antonio of the Naval Air Warfare Center discusses recent developments in Advanced NVG and HMD Systems at SPIE Defense+Security 2008.

#### Workshop

### Active and Passive Signatures

Thursday 16 April · 8:20 am to 5:00 pm · Crystal A Ballroom

Conference Chairs: **G. Charmaine Gilbreath**, Naval Research Lab.; **Chadwick T. Hawley**, National Signature Program

#### Keynote Speaker:

**The Honorable James B. Longley, Jr.**, The Advanced Technical Intelligence Association

This workshop will focus on active and passive signatures, which are key to detection and identification of events. Such signatures can be characterized as either phenomenological or as a predictable marker or pattern. In this new workshop, we will be presenting papers on how signature science can address the challenges of the changing world.

This workshop is held in conjunction with the Atmospheric Propagation conference, 7324.

#### Panel Discussion

### Fiber Optic Sensors Panel on Industry, Lab, and University Cooperation

Friday 17 April · 11:00 am to 12:00 pm · Grand Ballroom 7B

Panelists: **Eric Udd**, Columbia Gorge Research; **Johan Vlekken**, Fibre Optic Sensors and Sensing Systems (Belgium); **Alexis Mendez**, MCH Engineering LLC; **Henry H. Du**, Stevens Institute of Technology; **Anbo Wang**, Virginia Polytechnic Institute and State Univ.

This one-hour panel discussion and workshop will be directed toward a discussion of business and development issues associated with commercialization and deployment of fiber optic sensor technology. Considerable success has been achieved in certain areas such as civil structures and there have been successes in oil and gas, wind power, aerospace, and the medical field. It is also apparent that there is a great deal more to do and that the deployments that have been made represent the early stages of the introduction of this new technology. Questions and participation by the audience will be encouraged.

This panel discussion is held in conjunction with the Fiber Optic Sensors and Applications conference, 7316.

**CEU .35 \$310 / \$360 USD**  
**Wednesday 8:30 am to 12:30 pm**

This workshop teaches skills needed to lead technical projects, drive innovation, and influence others. Attendees learn the difference between leadership and management, and how to develop specific leadership skills that are important to technical professionals who lead projects or need assistance from others to get things done. Participants engage in exercises that assess their individual leadership abilities and provide guidance for further skill development.

### INSTRUCTOR

**Gary Hinkle** is President and founder of Auxilium, Inc. His experience includes a broad variety of management and staff assignments with small, medium, and large companies involved in the development and manufacturing of high-tech products. Gary led several high-profile projects including the development of a U.S. Army vehicle maintenance system, and he directed the development of 9-1-1 systems used in the majority of Public Safety Answering Points in the U.S. He also served as engineering manager for the world's best selling oscilloscope product line at Tektronix. His design and management experience spans the electronics, mechanical and software engineering disciplines.

COURSE PRICE INCLUDES a comprehensive workbook and email/phone follow-up with the instructor after the workshop to assist with implementation.

## Complying with the ITAR: A Case Study

WS933

**NEW**

**Course level: Introductory**  
**CEU .35 \$310 / \$360 USD**  
**Wednesday 1:30 to 5:30 pm**

In the world of international trade, it's what you don't know that can hurt you. With the U.S. government's focus on homeland security and its increasing reliance on photonics for the development and production of defense-related products and services, your activities may well be subject to the ITAR.

This workshop will begin with a brief contextual overview of U.S. export controls, including the Export Administration Regulations, the ITAR, and special sanction programs administered by the Treasury Department's Office of Foreign Assets Control. We will then transition into a case study focused on the ITAR. Real world situations and lessons learned will be shared. Various aspects of the case study will likely be familiar to you in the context of your own experiences, allowing you to learn effectively how to spot ITAR issues before they negatively impact your business. You will also learn about current enforcement trends and best practices for avoiding violations.

### INSTRUCTOR

**Kerry Scarlott** is a partner at Posternak Blankstein & Lund LLP, where he focuses his practice on business law and international trade. He is expert in advising technology-based companies on how to effectively and efficiently navigate U.S. export control laws and regulations.

## Leading Successful Product Innovation

WS951

**NEW**

**Course level: Intermediate**  
**CEU .35 \$310 / \$360 USD**  
**Tuesday 1:30 to 5:30 pm**

The fundamental goal of this course is to answer the question: "How do I take an idea off the white-board and turn it into a windfall product?" We will explore and apply the principles of good leadership to create a culture of excellence within your organization- the most basic ingredient for success. A special emphasis will be placed on learning how to develop and construct an effective new project pitch using the instructor's "Disciplined Creativity" concept and framework. We will then describe the "Spiral Development Process" for rapid, effective, and successful prototype development, followed by an in-depth examination of the life-cycle approach to product development. This course will also enable you to conduct a "red teaming" exercise to identify competitive threats, identify weaknesses in your company, and most importantly, develop solution strategies. We will also place an emphasis on how to properly vet an idea and how to ask tough-minded questions designed to ferret out shortcomings.

### INSTRUCTOR

**John Carrano** is President of Carrano Consulting. Previously, he was the Vice President, Research & Development, Corporate Executive Officer, and Chairman of the Scientific Advisory Board for Luminex Corporation, where he led the successful development of several major new products from early conception to market release and FDA clearance. Before joining Luminex, Dr. Carrano was as a Program Manager at DARPA, where he created and led several major programs related to bio/chem sensing, hyperspectral imaging and laser systems. He retired from the military as a Lieutenant Colonel in June 2005 after over 24 years' service; his decorations include the "Defense Superior Service Medal" from the Secretary of Defense. Dr. Carrano is a West Point graduate with a doctorate in Electrical Engineering from the University of Texas at Austin. He has co-authored over 50 scholarly publications and has 3 patents pending. He is the former DSS Symposium Chairman (2006-2007).

### THERMOSENSE MISSION STATEMENT

The purpose of Thermosense is to promote the exchange of information pertaining to the use of infrared sensing and imaging instruments for diagnostics and controls. Presentations should address the solutions to problems and their reduction to practice.

### THERMOSENSE BACKGROUND

Thermosense is the oldest and largest international technical meeting focused on scientific, industrial and general uses of Infrared Imaging and Infrared Temperature Measurements. Its regular printed proceedings are found in most scientific and engineering libraries, providing an unequaled depth and breadth of technical information and reference data. Further information regarding Thermosense can be found at: [www.thermosense.org](http://www.thermosense.org)

## Monday 13 April

### Vendor Presentations and Reception

*Monday 13 April · 5:00 to 8:00 pm · Crystal J2 Ballroom*

*Chairs:* **G. Raymond Peacock**, Temperatures.com, Inc.; **Herbert Kaplan**, Honeyhill Technology Co.

This event features brief presentations from hardware and software vendors on what is new this year in their product lines that impact thermal imaging applications and practices.

### What's News in Hardware and Software at the 2009 DSS Exhibition?

This Special Session was started four years ago and has been a very popular, well-attended success. Its intent is to bring together vendors and early arrival Thermosense and DSS exhibitors to highlight the newest products and services being shown at the Exhibition. In this way, the busy technical conference attendees can better prioritize their activities when visiting the exhibits. It is also a relaxed opportunity for getting to know one another better and to have informal discussions on matters of mutual interest. A limited time for 10- to 15-minute vendor presentations starts the session, followed by a reception with snacks and soft drinks. The list of vendors presenting will be in the final program and also available on-site.

Your company must be an exhibitor at DSS09 to be part of this event. If you are interested in participating, or have more questions, please contact: G. Raymond Peacock: [rpeacock@temperatures.com](mailto:rpeacock@temperatures.com) or Herbert Kaplan: [hkaplan@earthlink.net](mailto:hkaplan@earthlink.net)

This vendor session is held in conjunction with the Thermosense conference, 7299.

**Fifty years of noise radar**

The concept of noise radar was pioneered 50 years ago by Billy Horton of the former Diamond Ordnance Fuze Laboratory (renamed Harry Diamond Laboratories and then combined with other entities to form what is now the Army Research Laboratory) in Washington, D.C., USA. Horton recognized that one way to eliminate range and Doppler ambiguities was to use random noise as the modulating function and perform range determination by cross-correlating the return signal with a time-delayed replica of the transmit waveform. The talk will provide a historical account of noise radar from 1959 to 2009, describe notable results from worldwide R&D activities in noise radar, and predict possible developments over the next 50 years. Our efforts to track down Mr. Horton made us aware of some sad news. An obituary in the Washington Post on May 3, 2003, read in part: "Billy Mitchusson Horton, 84, an inventor and Army Department civilian who worked for the Harry Diamond Laboratories from 1953 to 1974 and became its technical director, died of a respiratory ailment April 28 at a hospice in Cleveland." However, his legacy lives on.

This one-hour panel discussion and workshop will be directed toward a discussion of business and development issues associated with commercialization and deployment of fiber optic sensor technology. Considerable success has been achieved in certain areas such as civil structures and there have been successes in oil and gas, wind power, aerospace, and the medical field. It is also apparent that there is a great deal more to do and that the deployments that have been made represent the early stages of the introduction of this new technology. Questions and participation by the audience will be encouraged.

### Audio, Video, Digital Recording Policy

**In the Meeting Rooms and Poster Sessions:** For copyright reasons, recordings of any kind are strictly prohibited without prior written consent of the presenter in any conference session, course or of posters presented. Each presenter being taped must file a signed written consent form. Individuals not complying with this policy will be asked to leave a given session and asked to surrender their film or recording media. Consent forms are available at the SPIE Audiovisual Desk.

**In the Exhibition Hall:** For security and courtesy reasons, photographing or videotaping individual booths and displays in the exhibit hall is allowed ONLY with explicit permission from on-site company representatives. Individuals not complying with this policy will be asked to surrender their film and to leave the exhibit hall.

### Laser Pointer Safety Information

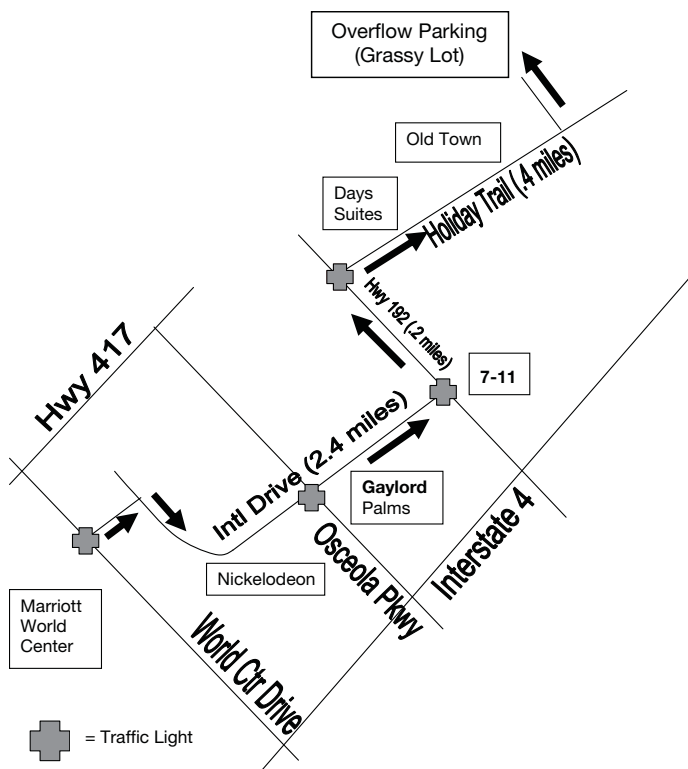

SPIE supplies tested and safety approved laser pointers for all conference meeting rooms, and for short course rooms if instructors request one. For safety reasons, SPIE requests that presenters use our provided laser pointers available in each meeting room.

If using your own laser pointer, have it tested at your facility to make sure it has <5 mW power output. Laser pointers in Class II and IIIa (<5 mW) are eye safe if power output is correct - but don't automatically trust the labeling. Commercially available laser pointers, red or green (or any color), could be incorrectly labeled as to their wavelength and power output.

Presenters intending to use their own laser pointer for presentations are required to come to the Speaker Check In Desk onsite and test their pointer on our power meter. If the pointer fails the safe power level you may not use the pointer at the conference. You will be required to sign a waiver releasing SPIE of any liability for use of potentially non-safe laser pointers.

Use of a personal laser pointer at an SPIE event represents user's acceptance of liability for use of a non-SPIE supplied laser pointer device. Misuse of any laser pointer could lead to eye damage.

**1999** - Alpha: the world's smallest, lowest power IR camera

**2003** - Omega: the next generation. Still the smallest, low-power IR camera, with over 10,000 sold.

**2004** - Automotive IR core: over 70,000 sold to date

**2009** - FLIR raises the bar yet again... with the Tau family of IR cameras

**2005** - Photon: the world's most versatile OEM IR camera, over 35,000 sold to date

We've redefined lightweight, low-power thermal imaging...again!

**Tau** - the new Core by Indigo thermal imaging camera core from FLIR Systems. It's small enough for the tightest volume constraints, light enough for any weight budget, and draws less power than a dead frog.
