An autonomous structural health monitoring solution

Carol Featherston et al.
Cardiff Univ. (United Kingdom)

Abstract: Combining advanced sensor technologies, with optimised data acquisition and diagnostic and prognostic capability, structural health monitoring (SHM) systems provide real-time assessment of the integrity of bridges, buildings, aircraft, wind turbines, oil pipelines and ships, providing improved safety and reliability and reduced inspection and maintenance costs. The implementation of power harvesting, using energy scavenged from ambient sources such as thermal gradients and sources of vibration, alongside wireless transmission enables truly autonomous systems, reducing the need for batteries and associated maintenance in often inaccessible locations, alongside bulky and expensive wiring looms.

The design and implementation of such a system however presents numerous challenges. A suitable energy source or multiple sources capable of meeting the power requirements of the system, over the entire monitoring period, in a location close to the sensor must be identified. Efficient power management techniques must be used to condition the power and deliver it, as required, to enable appropriate measurements to be taken. Energy storage may be necessary, to match a continuously changing supply and demand for a range of different monitoring states including sleep, record and transmit. An appropriate monitoring technique, capable of detecting, locating and characterising damage and delivering reliable information, whilst minimising power consumption, must be selected. Finally a wireless protocol capable of transmitting the levels of information generated at the rate needed in the required operating environment must be chosen.

This paper considers solutions to some of these challenges, and in particular examines SHM in the context of the aircraft environment.

Biography: **Dr Carol Featherston** is a Reader in Mechanical Engineering at Cardiff School of Engineering. Following time spent in industry, working in the area of structural performance in the aircraft and chemical industries with British Aerospace and ICI, she returned to academia to study the 'Stability of Lightweight Structures' at Exeter College Oxford in association with Rolls Royce. She now leads the Aerospace Research Theme at Cardiff concentrating on the design and optimisation, modelling, testing and structural health monitoring of a range of structures, with partners including Airbus, Boeing and EADS.

Biologically inspired large scale chemical sensor arrays and embedded data processing

Santiago Marco
Univ. of Barcelona (Spain), et al.

Abstract: Biological olfaction outperforms chemical instrumentation in specificity, response time, detection limit, coding capacity, time stability, robustness, size, power consumption, and portability. This biological function provides outstanding performance due, to a large extent, to the unique architecture of the olfactory pathway, which combines a high degree of redundancy, an efficient combinatorial coding along with unmatched chemical information processing mechanisms. The last decade has witnessed important advances in the understanding of the computational primitives underlying the functioning of the olfactory system.

EU Funded Project NEUROCHEM (Bio-ICT-FET- 216916) has developed novel computing paradigms and biologically motivated artefacts for chemical sensing taking inspiration from the biological olfactory pathway. To demonstrate this approach, a biomimetic demonstrator has been built featuring a large scale sensor array (65K elements) in conducting polymer technology mimicking the olfactory receptor neuron layer, and abstracted biomimetic algorithms have been implemented in an embedded system that interfaces the chemical sensors. The embedded system integrates computational models of the main anatomic building blocks in the olfactory pathway: the olfactory bulb, and olfactory cortex in vertebrates (alternatively, antennal lobe and mushroom bodies in the insect). For implementation in the embedded processor an abstraction phase has been carried out in which their processing capabilities are captured by algorithmic solutions. Finally, the algorithmic models are tested with an odour robot with navigation capabilities in mixed chemical plumes

Biography: **Santiago Marco** completed his university degree in Applied Physics in 1988 and received a PhD in Microsystem Technology from the University of Barcelona in 1993. He held a European Human Capital Mobility grant for a postdoctoral position at the Department of Electronic Engineering at the University of Rome "Tor Vergata". Since 1995, he is Associate Professor of Electronic Instrumentation at the Department of Electronics at the University of Barcelona. In 2004 he had a sabbatical leave at EADS-Corporate Research, Munich, working on Ion Mobility Spectrometry. In 2008 he was appointed leader of the Artificial Olfaction Lab at the Institute of Bioengineering of Catalonia. His research concerns the development of signal/data processing algorithmic solutions for smart chemical sensing based in sensor arrays or microspectrometers integrated typically using Microsystem Technologies.

Micro- and nanoscale thermoelectrics: an overview over basic concepts and recent advances

Markus Winkler

Fraunhofer Institute for Physical Measurement Techniques
IPM (Germany), et al.

Abstract: Micro- and nanostructuring thermoelectric materials have opened new fields for the applications of thermoelectricity. Micro-thermoelectrics are a general variant of thermoelectrics to enable special applications like localized cooling and small-scale energy harvesting to power autonomous sensor systems. In contrast, nano-thermoelectrics is a term generally applied to the art of nanostructuring materials, aiming at an increased figure of merit ZT and thus an improvement in device efficiency.

In the talk recent advances in the field of micro-thermoelectrics are presented. Furthermore, the theoretical principles and concepts behind nanostructured materials will be elucidated. This will be followed by selected examples of the application of nanostructuring in thermoelectric materials research and device fabrication. Results reported previously in literature as well as recent results obtained within our group will be presented, illustrating the diversity of thermoelectric material research.

Biography: **Markus Winkler** is a PhD student and member of the department "Thermoelectric Systems" at the Fraunhofer Institute for Physical Measurement Techniques. He received his diploma in 2008 after researching the deposition and doping of lead telluride based compounds by molecular beam epitaxy. Since then, he has been working on and managing several projects with a focus on the synthesis and characterization of (nanostructured) V₂VI₃ based thin-film materials for thermoelectric applications. Currently, his main work is funded by the SPP1386 initiated by the Deutsche Forschungsgemeinschaft and the program frame "Werkstoffinnovationen für Industrie und Gesellschaft", funding program "Nanochance", 03X4506B initiated by the Bundesministerium für Bildung und Forschung.

Travel to Grenoble, France

Grenoble, France

Grenoble is a city in southeastern France, at the foot of the French Alps where it is beautifully situated on the Drac and Isère rivers, and surrounded by mountains. Grenoble is a lively, modern city, home to four universities, with more than 50,000 students. Its location in the Rhône-Alpes region has led to the city being known in France as the "Capital of the Alps".

Grenoble Tourism

The city is now a significant scientific centre in Europe and includes chemical and electronics industries as well as nuclear research. It is also at the heart of French micro- and nanotechnology research, with the CNRS, CEA LETI, and MINATEC based in Grenoble, where 2400 researchers, 1200 students and 600 companies and technology transfer specialists have grouped around infrastructures established by the Grenoble Institute of Technology and CEA LETI in 2002.

Transportation

Airport Information:

Grenoble can be accessed by air from Grenoble-Isère Airport, Lyon Saint-Exupéry Airport and Geneva International Airport. Within Grenoble, there is a comprehensive bus and tram service that operates 26 bus routes and four tram lines and serves much of greater Grenoble. Being essentially flat, Grenoble is a bicycle-friendly city.

Transport from the Airport:

Lyon Airport provides regular connections to Grenoble, either via shuttle bus (for reservations visit the Faure Vercors website or, in France, call 0825 825 536 (N°indigo). You may also visit www.sncf.com, if you prefer to make the journey by train from Paris.

The Gare de Grenoble is served by the TGV rail network, with frequent high-speed services to and from Paris-Gare de Lyon, often with a stop at Lyon Saint-Exupéry Airport. There are also less frequent long distance trains to and from other destinations in France, such as Lille Europe and Nantes. Local rail services connect Grenoble with Lyon, Geneva, and other destinations to the east. Valence to the west provides connections with TGV services along the Rhone valley. Rail and road connections to the south are less well-developed.

Policies

Granting Attendee Registration and Admission

SPIE, or their officially designated event management, in their sole discretion, reserves the right to accept or decline an individual's registration for an event. Further, SPIE, or event management, reserves the right to prohibit entry or remove any individual whether registered or not, be they attendees, exhibitors, representatives, or vendors, who in their sole opinion are not, or whose conduct is not, in keeping with the character and purpose of the event. Without limiting the foregoing, SPIE and event management reserve the right to remove or refuse entry to any attendee, exhibitor, representative, or vendor who has registered or gained access under false pretenses, provided false information, or for any other reason whatsoever that they deem is cause under the circumstances.

Misconduct Policy

SPIE is a professional, not-for-profit society committed to providing valuable conference and exhibition experiences. SPIE is dedicated to equal opportunity and treatment for all its members and meeting attendees. Attendees are expected to be respectful to other attendees, SPIE staff, and contractors. Harassment and other misconduct will not be tolerated; violators will be asked to leave the event.

Identification

To verify registered participants and provide a measure of security, SPIE will ask attendees to present a government-issued Photo ID at registration to collect registration materials.

Individuals are not allowed to pick up badges for attendees other than themselves. Further, attendees may not have some other person participate in their place at any conference-related activity. Such other individuals will be required to register on their own behalf to participate.

Capture and Use of a Person's Image

By registering for this event, I grant full permission to SPIE to capture, store, use, and/or reproduce my image or likeness by any audio and/or visual recording technique (including electronic/digital photographs or videos), and create derivative works of these images and recordings in any SPIE media now known or later developed, for any legitimate SPIE marketing or promotional purpose. By registering for this event, I waive any right to inspect or approve the use of the images or recordings or of any written copy. I also waive any right to royalties or other compensation arising from or related to the use of the images, recordings, or materials. By registering, I release, defend, indemnify and hold harmless SPIE from and against any claims, damages or liability arising from or related to the use of the images, recordings or materials, including but not limited to claims of defamation, invasion of privacy, or rights of publicity or copyright infringement, or any misuse, distortion, blurring, alteration, optical illusion or use in composite form that may occur or be produced in taking, processing, reduction or production of the finished product, its publication or distribution.

Payment Method

Registrants for paid elements of the event, who do not provide a method of payment, will not be able to complete their registration. Individuals with incomplete registrations will not be able to attend the conference until payment has been made. SPIE accepts VISA, MasterCard, American Express, Discover, Diner's Club, checks and wire transfers. Onsite registrations can also pay with Cash.

Authors/Coauthors

By submitting an abstract, you agree to the following conditions:

- An author or coauthor (including keynote, invited, and solicited speakers) will register at the author registration rate, attend the meeting, and make the presentation as scheduled.

- A full-length manuscript (6-12 pages) for any accepted oral or poster presentation will be submitted for publication in the SPIE Digital Library, printed conference Proceedings, and CD. (Some SPIE events have other requirements that the author is made aware of at the time of submission.)
- Only papers presented at the conference and received according to publication guidelines and timelines will be published in the conference Proceedings and SPIE Digital Library (or via the requirements of that event).

Audio, Video, Digital Recording Policy

Conferences, courses, and poster sessions: For copyright reasons, recordings of any kind are prohibited without prior written consent of the presenter. Attendees may not capture nor use the materials presented in any meeting room without written permission. Consent forms are available at Speaker Check-In. Individuals not complying with this policy will be asked to leave a given session and asked to surrender their recording media.

Exhibition Hall: For security and courtesy reasons, recordings of any kind are prohibited unless one has explicit permission from on-site company representatives. Individuals not complying with this policy will be asked to surrender their recording media and to leave the exhibition hall.

Your registration signifies your agreement to be photographed or videotaped by SPIE in the course of normal business. Such photos and video may be used in SPIE marketing materials or other SPIE promotional items.

Laser Pointer Safety Information/Policy

SPIE supplies tested and safety-approved laser pointers for all conference meeting rooms. For safety reasons, SPIE requests that presenters use provided laser pointers.

Use of a personal laser pointer represents user's acceptance of liability for use of a non-SPIE-supplied laser pointer. If you choose to use your own laser pointer, it must be tested to ensure <5 mW power output. Laser pointers in Class II and IIIa (<5 mW) are eye safe if power output is correct, but output must be verified because manufacturer labeling may not match actual output. Come to Speaker Check-In and test your laser pointer on our power meter. You are required to sign a waiver releasing SPIE of any liability for use of potentially non-safe, personal laser pointers. Misuse of any laser pointer can lead to eye damage.

Access to Technical and Networking Events

Persons under the age of 18 are not allowed in technical or networking events. Anyone 18 or older must register as an attendee. All technical and networking events require a valid conference badge for admission.

Underage Persons on Exhibition Floor Policy

For safety and insurance reasons, no one under the age of 16 will be allowed in the exhibition area during move-in and move-out. During open exhibition hours, only children over the age of 12 accompanied by an adult will be allowed in the exhibition area.

Unauthorized Solicitation Policy

Unauthorized solicitation in the Exhibition Hall is prohibited. Any non-exhibiting manufacturer or supplier observed to be distributing information or soliciting business in the aisles, or in another company's booth, will be asked to leave immediately.

Unsecured Items Policy

Personal belongings should not be left unattended in meeting rooms or public areas. Unattended items are subject to removal by security. SPIE is not responsible for items left unattended.

General Information

Policies continued

Wireless Internet Service Policy

At SPIE events where wireless is included with your registration, SPIE provides wireless access for attendees during the conference and exhibition but cannot guarantee full coverage in all locations, all of the time. Please be respectful of your time and usage so that all attendees are able to access the internet.

Excessive usage (e.g., streaming video, gaming, multiple devices) reduces bandwidth and increases cost for all attendees. No routers may be attached to the network. Properly secure your computer before accessing the public wireless network. Failure to do so may allow unauthorized access to your laptop as well as potentially introduce viruses to your computer and/or presentation. SPIE is not responsible for computer viruses or other computer damage.

Mobile Phones and Related Devices Policy

Mobile phones, tablets, laptops, pagers, and any similar electronic devices should be silenced during conference sessions. Please exit the conference room before answering or beginning a phone conversation.

Smoking

For the health and consideration of all attendees, smoking is not permitted at any event elements, such as but not limited to: plenaries, conferences, workshops, courses, poster sessions, hosted meal functions, receptions, and in the exhibit hall. Most facilities also prohibit smoking in all or specific areas. Attendees should obey any signs preventing or authorizing smoking in specified locations.

Hold Harmless

Attendee agrees to release and hold harmless SPIE from any and all claims, demands, and causes of action arising out of or relating to your participation in the event you are registering to participate in and use of any associated facilities or hotels.

Event Cancellation

If for some unforeseen reason SPIE should have to cancel the event, registration fees processed will be refunded to registrants. Registrants will be responsible for cancellation of travel arrangements or housing reservations and the applicable fees.
