CELEBRATING THE International Day of Light

16 MAY

The International Day of Light is a global initiative that provides an annual focal point for the continued appreciation of light and the role it plays in science, culture and art, education, sustainable development, and in fields as diverse as medicine, communications, and energy.

This celebration is the ideal instrument to ensure awareness of the central role of light in the present and in the future of us all. Optics and photonics have unlimited potential in the development of light-based technologies for the equitable development of global society. Find out more at spie.org/IDL.
